“Who Benefits Most From a Same-Race Mentor? Evidence From a Nationwide Youth Mentoring Program” (with Zachary Szlendak and Corey Woodruff)

Abstract: We identify the impacts of assigning a mentor of the same race or ethnicity on the social, emotional and academic development of youth relative to assigning a mentor of a different race or ethnicity. Using the universe of matches from a nationwide youth mentoring program, we document that a rich set of pre-match observables are balanced across same-race/ethnicity match status. We find that Black and Hispanic youth assigned a same-race/ethnicity mentor had slightly faster growth in self-perceived school ability and attitudes toward risky behaviors after twelve months of mentoring, relative to cross-race matches. On the other hand, cross-race matched Hispanic youth had improvements in course grades and cross-race matched Black youth were more likely to report having a “special adult” in their life. In contrast to previous work on race-matching, we do not find improvements in grades or expectations for future educational attainment. Given that racial/ethnic minority mentors are often in short supply, these results imply matching on race or ethnicity at the expense of other desirable traits is not necessarily optimal.
